

```
boost::statechart::  
event< EvTransitionActiveShutdown  
    < TSourceObject, TOrthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ classes. At the top is a white box representing the base class `boost::statechart::event< EvTransitionActiveShutdown < TSourceObject, TOrthogonal > >`. It has three horizontal sections, with the first containing the class name. Below it is a grey box representing the derived class `cl_lifecyclenode::EvTransitionActiveShutdown< TSourceObject, TOrthogonal >`, also with three horizontal sections, the first containing the class name. A blue arrow points from the top of the grey box to the bottom of the white box, indicating that the grey class inherits from the white class.

```
cl_lifecyclenode::EvTransition  
ActiveShutdown< TSourceObject,  
    TOrthogonal >
```
