

```
boost::statechart::  
event< EvConnectionLost  
< TSource, TOrthogonal > >
```

The diagram shows two class boxes. The top box is white and represents the base class `boost::statechart::event< EvConnectionLost< TSource, TOrthogonal > >`. The bottom box is gray and represents the derived class `cl_modbus_tcp_relay::EvConnectionLost< TSource, TOrthogonal >`. A blue arrow with an open triangular head points from the bottom box to the top box, indicating inheritance.

```
cl_modbus_tcp_relay  
::EvConnectionLost<  
TSource, TOrthogonal >
```
