

```
boost::statechart::  
event< EvTransitionInactive  
Shutdown< TSourceObject,  
TOrthogonal > >
```

The diagram shows a class hierarchy. The top class, `boost::statechart::event< EvTransitionInactiveShutdown< TSourceObject, TOrthogonal > >`, is represented by a white box with a black border and is divided into three horizontal compartments. The bottom compartment is empty. The bottom class, `cl_lifecyclenode::EvTransitionInactiveShutdown< TSourceObject, TOrthogonal >`, is represented by a gray box with a black border and is also divided into three horizontal compartments, with the bottom one being empty. A blue arrow with an open triangular head points from the top compartment of the gray box to the bottom compartment of the white box, indicating that the gray class inherits from the white class.

```
cl_lifecyclenode::EvTransition  
InactiveShutdown< TSourceObject,  
TOrthogonal >
```
