

boost::statechart::
event< EvAuthenticationRequired
 < TSource, TOrthogonal > >

```
classDiagram
    class boost_statechart_event["boost::statechart::event< EvAuthenticationRequired< TSource, TOrthogonal > >"]
    class cl_gcalcli_ev_auth_req["cl_gcalcli::EvAuthenticationRequired< TSource, TOrthogonal >"]
    boost_statechart_event <|-- cl_gcalcli_ev_auth_req
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the base class: boost::statechart::event< EvAuthenticationRequired< TSource, TOrthogonal > >. Below it is a grey box representing the derived class: cl_gcalcli::EvAuthenticationRequired< TSource, TOrthogonal >. A blue arrow with an open triangle head points from the derived class box up to the base class box, indicating that the derived class inherits from the base class.

cl_gcalcli::EvAuthentication
Required< TSource, TOrthogonal >
