

```
boost::statechart::  
event< EvIncorrectInitialPosition  
      < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`, is shown in a white box at the top. The derived class, `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`, is shown in a grey box at the bottom. A blue arrow points from the derived class to the base class, indicating that the derived class inherits from the base class. The derived class has a public attribute `trajectory`, indicated by a plus sign.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
               Orthogonal >
```

```
+   trajectory
```
