

```
boost::statechart::  
event< EvIncorrectInitialPosition  
    < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ event types. At the top is a white box representing the base class `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`. It has two empty rectangular sections below the header. At the bottom is a gray box representing the derived class `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`. This box has a header section and a body section containing `+ trajectory`. Two blue arrows point from the top of the gray box to the bottom of the white box, indicating that the gray box inherits from the white box.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
    Orthogonal >
```

```
+    trajectory
```
