

```
boost::statechart::  
event< EvTopicMessage  
< TSource, TOrthogonal,  
typename TSource::TMessageType > >
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EvTopicMessage< TSource, TOrthogonal, typename TSource::TMessageType > >`. It has two empty rectangular slots below its definition. A dark gray box at the bottom represents the derived class `smacc2::default_events::EvTopicMessage< TSource, TOrthogonal, TMessageType >`. It contains a public member `+ msgData` and a public method `+ getEventLabel()`. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating that the derived class inherits from the base class.

```
smacc2::default_events  
::EvTopicMessage< TSource,  
TOrthogonal, TMessageType >
```

```
+    msgData
```

```
+    getEventLabel()
```
