

cl_nav2z::CpWaypointNavigator
::onStateOrthogonalAllocation

cl_nav2z::CpWaypointNavigator
Base::onStateOrthogonalAllocation

WaypointEventDispatcher
::initialize

```
graph LR; A[cl_nav2z::CpWaypointNavigator::onStateOrthogonalAllocation] --> C[WaypointEventDispatcher::initialize]; B[cl_nav2z::CpWaypointNavigatorBase::onStateOrthogonalAllocation] --> C;
```

The diagram illustrates two function calls to a common dispatcher. On the left, two white rectangular boxes with black borders contain the function names. The top box is 'cl_nav2z::CpWaypointNavigator::onStateOrthogonalAllocation' and the bottom box is 'cl_nav2z::CpWaypointNavigatorBase::onStateOrthogonalAllocation'. On the right, a gray rectangular box contains 'WaypointEventDispatcher::initialize'. Two blue arrows point from the right side of each white box to the left side of the gray box, indicating that both functions call the dispatcher's initialize method.
