::CpModbusRelay::writeAllCoils

```
graph LR; A["cl_modbus_tcp_relay::CbAllRelaysOff::onEntry"] --> C["cl_modbus_tcp_relay::CpModbusRelay::writeAllCoils"]; B["cl_modbus_tcp_relay::CbAllRelaysOn::onEntry"] --> C; C --> C;
```

The diagram illustrates a control flow. On the left, two white rectangular boxes represent entry functions: 'cl_modbus_tcp_relay::CbAllRelaysOff::onEntry' (top) and 'cl_modbus_tcp_relay::CbAllRelaysOn::onEntry' (bottom). On the right, a gray rectangular box represents the 'cl_modbus_tcp_relay::CpModbusRelay::writeAllCoils' function. A straight blue arrow points from the right side of the top white box to the left side of the gray box. Another straight blue arrow points from the right side of the bottom white box to the left side of the gray box. A curved blue arrow originates from the top edge of the gray box and points back to its top edge, indicating a self-loop or recursive call.
