

```
boost::statechart::  
event< EvKeyPressM<  
    TSource, TOrthogonal > >
```

The diagram illustrates an inheritance relationship. At the bottom is a grey box representing the base class `cl_keyboard::components` with its `EvKeyPressM` event. Two blue arrows point upwards from this box to a white box above it, representing the derived class `boost::statechart::event`. The white box contains the same event signature, indicating that it inherits from the base class.

```
cl_keyboard::components  
::EvKeyPressM< TSource,  
    TOrthogonal >
```
