

```
boost::statechart::  
event< EvIncorrectInitialPosition  
      < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`. It has two empty rectangular sections below the definition. A darker gray box at the bottom represents the derived class `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`, which includes a `+ trajectory` member. Two blue arrows point upwards from the derived class box to the base class box, indicating that the derived class inherits from the base class.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
               Orthogonal >
```

```
+   trajectory
```
