

```
boost::statechart::  
event< EvIncorrectInitialPosition  
      < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`. It has two empty compartments below the header. A dark gray box at the bottom represents the derived class `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`. It has a header with the class name and two compartments below it, the second of which contains the public attribute `+ trajectory`. A blue arrow points from the top of the derived class box to the bottom of the base class box, indicating inheritance.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
               Orthogonal >
```

```
+   trajectory
```
