

```
boost::statechart::  
event< EvIncorrectInitialPosition  
    < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`. It has two empty rectangular compartments below the header. A darker gray box at the bottom represents the derived class `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`. It has a header compartment, a compartment containing `+ trajectory`, and an empty compartment at the bottom. Two blue arrows point upwards from the top of the derived class box to the bottom of the base class box, indicating that the derived class inherits from the base class.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
    Orthogonal >
```

```
+    trajectory
```
