

```
boost::statechart::  
event< EvKeyPressI<  
    TSource, TOrthogonal > >
```

The diagram illustrates an inheritance relationship. At the bottom is a grey box representing the base class `cl_keyboard::components::EvKeyPressI`. Two blue arrows point upwards from this box to a white box above it, representing the derived class `boost::statechart::event`. The white box contains the text `boost::statechart::event< EvKeyPressI< TSource, TOrthogonal > >`. Both boxes are divided into three horizontal sections, with the top section containing the class name and the bottom two sections being empty.

```
cl_keyboard::components  
::EvKeyPressI< TSource,  
    TOrthogonal >
```
