

```
boost::statechart::  
event< EvIncorrectInitialPosition  
      < AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ event types. At the top is a white box representing the base class `boost::statechart::event< EvIncorrectInitialPosition < AsyncCB, Orthogonal > >`. It has two empty rectangular sections below the header. At the bottom is a gray box representing the derived class `cl_moveit2z::EvIncorrectInitialPosition< AsyncCB, Orthogonal >`. This box has a header section and two additional sections below it, one of which contains the text `+ trajectory`. Two blue arrows point upwards from the top of the gray box to the bottom of the white box, indicating that the gray box inherits from the white box.

```
cl_moveit2z::EvIncorrect  
InitialPosition< AsyncCB,  
               Orthogonal >
```

```
+   trajectory
```
