

```
boost::statechart::  
event< EvActionCancelled  
< TSource, TOrthogonal > >
```

A UML class diagram showing inheritance. The base class is `boost::statechart::event< EvActionCancelled< TSource, TOrthogonal > >`. The derived class is `smacc2::default_events::EvActionCancelled< TSource, TOrthogonal >`. A blue arrow points from the derived class to the base class. The derived class has four public methods: `resultMessage`, `getEventLabel()`, `getDefaultTransitionTag()`, and `getDefaultTransitionType()`.

```
smacc2::default_events  
::EvActionCancelled< TSource,  
TOrthogonal >
```

```
+ resultMessage
```

```
+ getEventLabel()
```

```
+ getDefaultTransitionTag()
```

```
+ getDefaultTransitionType()
```
