

```
boost::statechart::  
event< EvTransitionInactive  
Shutdown< TSourceObject,  
TOrthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ classes. The base class, `boost::statechart::event< EvTransitionInactiveShutdown< TSourceObject, TOrthogonal > >`, is shown in a white box at the top. The derived class, `cl_lifecycle_node::EvTransitionInactiveShutdown< TSourceObject, TOrthogonal >`, is shown in a gray box at the bottom. A blue arrow points from the derived class to the base class, indicating that the derived class inherits from the base class. Both class boxes are divided into three horizontal compartments: the top for the class name, and two empty compartments below for attributes and methods.

```
cl_lifecycle_node::  
EvTransitionInactiveShutdown  
< TSourceObject, TOrthogonal >
```
