

```
boost::statechart::  
event< EvTransitionOnShutdown  
Error< TSourceObject, TOrthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ classes. A light gray box at the top represents the base class, `boost::statechart::event< EvTransitionOnShutdownError< TSourceObject, TOrthogonal > >`. It contains two empty rectangular slots below the definition. A dark gray box at the bottom represents the derived class, `cl_lifecycle_node::EvTransitionOnShutdownError< TSourceObject, TOrthogonal >`, which also contains two empty rectangular slots. A blue arrow with a hollow triangular head points from the top of the derived class box to the bottom of the base class box, indicating that the derived class inherits from the base class.

```
cl_lifecycle_node::  
EvTransitionOnShutdownError  
< TSourceObject, TOrthogonal >
```
