

```
boost::statechart::  
event< EvCbFailure<  
  AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ event types. A light gray box at the top represents the base class, `boost::statechart::event< EvCbFailure< AsyncCB, Orthogonal > >`. A darker gray box at the bottom represents the derived class, `smacc2::EvCbFailure< AsyncCB, Orthogonal >`. A blue arrow points from the derived class box up to the base class box, indicating that `smacc2::EvCbFailure` inherits from `boost::statechart::event`. Both boxes are divided into three horizontal sections, with the top section containing the code and the bottom two sections being empty.

```
smacc2::EvCbFailure  
< AsyncCB, Orthogonal >
```
