

```
boost::statechart::  
event< EvCbFailure<  
  AsyncCB, Orthogonal > >
```

The diagram illustrates an inheritance relationship between two C++ event types. At the bottom is a grey box representing the base class, `smacc2::EvCbFailure < AsyncCB, Orthogonal >`. A blue arrow points upwards from this box to a white box at the top, representing the derived class, `boost::statechart::event< EvCbFailure< AsyncCB, Orthogonal > >`. Both boxes are divided into three horizontal sections, with the first section containing the code and the other two sections being empty.

```
smacc2::EvCbFailure  
< AsyncCB, Orthogonal >
```
