

```
boost::statechart::  
event< EvActionCancelled  
< TSource, TOrthogonal > >
```

A UML class diagram showing inheritance. A light gray box at the top represents the base class `boost::statechart::event< EvActionCancelled< TSource, TOrthogonal > >`. It has two empty rectangular compartments below the header. A dark gray box at the bottom represents the derived class `smacc2::default_events::EvActionCancelled< TSource, TOrthogonal >`. It has a header compartment, an empty middle compartment, and a bottom compartment containing three methods: `+ getEventLabel()`, `+ getDefaultTransitionTag()`, and `+ getDefaultTransitionType()`. A blue arrow with an open triangular head points from the derived class box up to the base class box, indicating inheritance.

```
smacc2::default_events  
::EvActionCancelled< TSource,  
TOrthogonal >
```

```
+ getEventLabel()  
+ getDefaultTransitionTag()  
+ getDefaultTransitionType()
```
