

```
boost::statechart::  
event< EvKeyPressJ<  
    TSource, TOrthogonal > >
```

The diagram illustrates an inheritance relationship. At the bottom is a grey box representing the base class `cl_keyboard::components` with the event definition `::EvKeyPressJ< TSource, TOrthogonal >`. Two blue arrows point upwards from this box to a white box above it, representing the derived class `boost::statechart::event` which inherits the event definition.

```
cl_keyboard::components  
::EvKeyPressJ< TSource,  
    TOrthogonal >
```
